

POT TOWNSEND

Quality PNW Craft Cannabis At Its Finest.

Pot Townsend is based in the Victorian seaport town of Port Townsend, where we **manually blend our topicals** using cannabis that was hand-plucked from the sun-drenched fields of Omak and Tonasket. Our products speak to the agricultural bounty and **long history of home crafting** of Washington State.

The custom formula of 99.9% pure CBD, whole plant cannabis oil and arnica is the nerve center of each product; combined with therapeutic grade essential oils and medicinal plants, Pot Townsend Topicals provide a dream combination to provide you **deep and sustained pain relief**.

Joint Jam is a potent balm in handy stick form which can be used from temples to toes. Try it for spot relief on tennis elbow, carpal tunnel achiness, hikers' knees and any specific sore area from sport or travel.

Motion Lotion goes on silky to soothe and energize a broader surface area of the body. The addition of Chinese herbs make this a must-have for those with more extensive discomfort, inflammation or for use during a full-day of sports activity to enhance performance.

The modern alchemy of Pot Townsend Topicals provide a new solution to pain relief for your well-being! We hope that our unique scents, exceptional results and distinctive packaging will earn us a devoted following.

A Word on Topicals...

As more and more research is conducted on cannabinoids like THC and CBD and the endocannabinoid system, newer ways to use cannabinoid based products are being developed, including the use of one of our largest and most outward of organs - our skin.

Rather than smoking marijuana or ingesting it orally, which will affect the whole body and can take up to 2 hours or more to fully experience the effects, the topical application of cannabinoids allows them to be absorbed directly into the affected area for faster and more focused relief.

Topicals are non-psychoactive, so they are often popular among patients who want the therapeutic effects of cannabis but not the "high". This non-psychoactivity is because the cannabinoids in these topicals bind to CB2 receptors near the skin, activating the endocannabinoid system, and are never absorbed into the bloodstream.
